

PITCH DECK · NEXTRACT DATA SOLUTIONS

External Data, Fully Managed.

We deliver custom-built, reliably-maintained data pipelines for teams that need real market intelligence — without building the scraping stack themselves.

FOCUS

E-commerce · Quick Commerce · Food
Delivery

ENGAGEMENT

Custom Builds · Managed Retainers

hello@nextract.dev

— WHAT WE DO

We're the data team you didn't have to hire.

Nextract builds and operates the external data infrastructure for brands, platforms and research teams — web scraping, custom APIs, mobile-app data, and AI-powered enrichment — delivered as a fully managed service.

01 • Build

Custom-engineered pipelines

Scoped, specced and shipped for your exact platforms and data points.

02 • Run

Monitored delivery

Scheduled feeds into your warehouse, bucket or endpoint — we watch the health.

03 • Own

End-to-end accountability

Sites change, anti-bot evolves, schemas drift. We fix it before you notice.

External data is critical. Reliable external data is rare.

Most teams we talk to have tried one of three things: a DIY scraping team, a generic API tool, or an offshore agency. All three tend to break in the same ways.

DIY INFRASTRUCTURE

Engineering time disappears into scraping

Proxy rotation, CAPTCHA, headless browsers, site changes. None of it is your product.

BRITTLE PIPELINES

Feeds break the week you need them most

A launch, a promo, a board deck — and the pipeline silently stopped three days ago.

DATA QUALITY ROULETTE

You can't tell if the numbers are right

Missing rows, stale fields, mismatched SKUs. Decisions get made on noisy inputs.

MAINTENANCE TAX

The scope never actually shrinks

Every quarter adds a platform, a field, a region — and more infra no one wants to own.

Nothing off-the-shelf. Everything built for you.

We don't sell a generic scraper catalogue. Every engagement starts with the question, *"what decision is this data supporting?"* — and ends with a pipeline scoped to that answer.

Custom by default

Your target platforms, your data points, your delivery format. Nothing generic.

Fully managed operations

We run the infrastructure, track health, and respond to breakage. You get data — not tickets.

Founder-led accountability

Direct line to the person who scoped the build. No account-management layers.

SCOPE MODEL

Discovery → sample → scope → build

Nothing commits until you see real sample data.

TECH POSTURE

Pragmatic · ethical · resilient

Public data, sensible access patterns, defensible techniques.

DELIVERY POSTURE

Into your systems, not ours

S3, GCS, warehouse, webhook, custom API — your stack.

Four capabilities. One team.

Most engagements combine two or three of these into a single managed pipeline.

01

Web Scraping Services

Resilient extraction from marketplaces, directories, listings and long-tail sites.

Amazon

Flipkart

Walmart

Shopify

+40 more

02

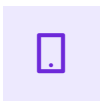

Custom API Development

On-demand REST endpoints into any platform — built to integrate with your product.

REST / GraphQL

Webhooks

Scheduled feeds

03

Mobile App Data Extraction

When the data only lives in the app — Blinkit, Zomato, Swiggy, Uber Eats, Instacart.

iOS · Android

App-API reversing

Geo-resolved

04

AI Data Solutions

Enrichment that turns raw extraction into usable intelligence.

Product matching

Sentiment

Classification

Dedup

Three verticals.

Real operator-grade depth.

We work across many industries — but we invest seriously in the data layers we think are under-served.

VERTICAL 01

E-commerce & Retail

Marketplaces, D2C, brands and agencies — price, catalogue, reviews, Buy Box, share of search.

PLATFORMS

Amazon

Walmart

Flipkart

eBay

Etsy

Shopify

TYPICAL BUYERS

Brand managers · Pricing teams ·
Agencies · Analytics leads

VERTICAL 02 · HERO

Quick Commerce

Dark-store intelligence, delivery-zone mapping, stockouts and ETA benchmarking — data that only lives inside mobile apps.

PLATFORMS

Blinkit

Zepto

Instamart

BigBasket

Instacart

TYPICAL BUYERS

FMCG brands · Ops leaders · Investors ·
Market researchers

VERTICAL 03

Food Delivery

Restaurant search rank, menu & pricing shifts, ghost-kitchen mapping, market-entry scans.

PLATFORMS

Zomato

Swiggy

DoorDash

Uber Eats

Deliveroo

TYPICAL BUYERS

Restaurant groups · Cloud kitchens ·
F&B brands · PE / diligence

Built to answer the questions merchandising & pricing teams actually ask.

A sample of use cases we've scoped and shipped — each one backed by a dedicated, monitored pipeline.

AMAZON INTELLIGENCE

Buy Box Monitoring

Hourly tracking across your ASINs — know who won, at what price, and when you lost it.

PROMOTIONAL ANALYTICS

Promotional Velocity

See which deals move volume, when discounts stop lifting sales, and where competitors are promoting.

CATEGORY INTELLIGENCE

Share of Search

Track how often your brand surfaces across category queries vs. every competitor in the set.

BRAND PROTECTION

Private-Label Monitoring

Spot copycats, unauthorised sellers and private-label encroachment before they eat margin.

DIGITAL SHELF

FMCG Digital Shelf

Availability, content compliance and ranking for every SKU on every retailer that matters.

CATALOGUE & REVIEWS

Catalogue & Review Intelligence

Clean catalogues, enriched attributes, and structured review signal — ready for analytics.

The data lives inside the app. We know how to get it out.

Blinkit, Zepto, Instamart, BigBasket — everything is behind a geo-locked mobile surface. Our Quick Commerce pipelines resolve real pincodes, real dark stores, real inventory.

● DARK-STORE INTEL

Dark-Store Intelligence

Map every dark store by pincode. Track SKU assortment, share and stock level per location.

● GEO COVERAGE

Delivery-Zone Mapping

Street-level serviceability per platform. Compare coverage, spot white spaces, size the gap.

● AVAILABILITY

Competitor Stockout Monitoring

Catch stockouts the hour they happen — for you, and for every brand fighting for the same shelf.

● PERFORMANCE

Delivery-ETA Benchmarking

Promised vs. actual delivery times by zone, hour and platform. Ops-grade SLA data.

RESOLUTION

Pincode-level

CADENCE

Up to hourly

DELIVERY

API, webhook, warehouse

From menu changes to ghost kitchens — the full picture of a delivery market.

Our food-delivery pipelines combine consumer-app surface data, merchant-side signals, and AI enrichment.

DISCOVERY

Restaurant Search Ranking

Where you rank on “pizza”, “biryani”, “healthy” — by city, hour, and platform.

MENU INTEL

Menu & Sentiment Analysis

Track menu additions, price changes, and what diners actually say about each dish.

MARKET MAPPING

Ghost Kitchen Intelligence

Identify virtual brands operating out of the same address. Size operators, not just restaurants.

EXPANSION

Food Delivery Market Entry

For chains entering a new city: density, cuisine saturation, pricing bands, opportunity zones.

Zomato

Consumer + merchant

Swiggy

App-side + web

DoorDash

Geo-resolved

Uber Eats

Multi-country

Whatever the source, we've probably built it.

Outside our core verticals, these are the industries we're shipping pipelines into regularly.

 INDUSTRY

Travel & Hospitality

Hotel pricing, OTAs, availability, reviews — Booking, Airbnb, Expedia, TripAdvisor.

 INDUSTRY

Real Estate

Listings, rent trends, absorption, off-market signals. Zillow, 99acres, MagicBricks.

 INDUSTRY

Financial Services

Market data, regulatory filings, news monitoring, compliance extraction.

 INDUSTRY

Market Research

Multi-source collection, cross-platform panels, custom datasets for analysts.

 INDUSTRY

PE / Diligence

Alternative data for investment theses, channel checks and diligence projects.

 INDUSTRY

SaaS & Startups

Data-backed products, lead enrichment, competitive intelligence at scale.

 Have a source we haven't listed?

If it's publicly accessible and legally scrape-able, we've likely already solved a harder version of it. Start with a 20-minute scoping call — we'll tell you honestly if it's a fit.

A process designed to de-risk the first month.

You never commit to a long build on a promise. You commit after seeing real sample data from your real target platform.

01

Discovery call

DAY 0 · 30 MIN

We map the decision the data supports, the platforms involved, the fields you need, and the acceptable cadence.

02

Sample delivery

48–72 HOURS · NO FEE

Real data from your real targets — in your preferred format. You review quality before any commitment.

03

Scope & build

1–3 WEEKS TYPICAL

Fixed-price project or retainer scope, a signed SOW, then engineering build with a single point of accountability.

04

Managed delivery

ONGOING

Feeds land in your stack on schedule. We monitor health, adapt to site changes, and surface issues before you notice them.

Why it's different: most vendors sell the contract first and scope later. We invert it — *sample first, scope second, contract only when the data is clearly good.*

Not just another scraping vendor.

Four things that tend to be the actual reason teams stay with us after the first project.

01 · OWNERSHIP

Founder-run engagements

The person who scopes your build is the person accountable when something breaks — not an account layer two levels removed.

02 · DEPTH

Real vertical fluency

We've shipped pipelines into the same categories for years. We know the edge cases your first vendor didn't warn you about.

03 · HONESTY

Sample before contract

If the data isn't good, we tell you — and we'd rather walk away from a bad-fit build than ship a fragile one.

04 · INTEGRATION

Delivered into your stack

S3, GCS, Snowflake, BigQuery, your own API, Slack, webhooks. You don't log into a portal to get value.

POSTURE

Ethical · public-data first

FEEDBACK LOOP

Direct line to engineering

SCOPE PHILOSOPHY

Small wins before big bets

Two ways to start. Both de-risked.

Everything is quoted after discovery + sample — never from a generic rate card.

OPTION 01

Fixed scope

Custom Build

One-time engagements with a fixed SOW and defined deliverable.

- ✓ Fixed price, fixed timeline, fixed scope
- ✓ Sample data delivered before SOW is signed
- ✓ Delivered to your warehouse / bucket / endpoint
- ✓ 30-day warranty post-delivery

Best for: one-time research datasets, diligence projects, backfills, category mapping studies.

OPTION 02

Retainer · most popular

Managed Data

Continuous feeds with ongoing monitoring, maintenance and support.

- ✓ Monthly or annual retainer with defined SLOs
- ✓ Active monitoring + site-change adaptation included
- ✓ Dedicated channel with engineering
- ✓ Scope can expand without re-contracting

Best for: pricing intel, digital-shelf monitoring, geo dashboards, ongoing competitive tracking.

Also available: Strategy consulting · embedded data-engineer engagements · custom partnerships.

ASK ABOUT THE PILOT SPRINT

— NEXT STEPS

Let's get sample data in your hands.

A 30-minute scoping call, a no-fee sample from your real targets within 72 hours, and honest feedback on whether we're the right team for the job.

01

Schedule call

30 min · discovery & scope

02

Receive sample

Real data · 48–72 hours · no fee

03

Start project

SOW signed · build begins
